Harsh Kumar

Erlangen, Germany | harshskumar59@gmail.com | +49 1551 0834664 | LinkedIn | GitHub | Project Portfolio

Profile

MSc Data Science student at FAU Erlangen with hands-on experience building Power BI dashboards, preparing data from multiple sources and validating KPIs before they reach a report. Industry experience with ETL processing 230K+ records per day and reporting for 20+ stakeholders. Project experience with healthcare data: medical imaging data quality and an AI assistant for medical documents. Based in Erlangen, close to Forchheim.

Education

FAU Erlangen-Nürnberg — *Erlangen, Germany*
Masters, Data Science — Apr 2025 - Present

SRM University — *Delhi NCR, India*
Bachelors, Computer Science Engineering — Oct 2020 - Jun 2024

Experience

Suflex Media — *Bangalore (Hybrid)*
Data Analyst — Jan 2024 - Feb 2025

- **Intaskr (intaskr.com):** contributed to backend development and data infrastructure of a SaaS task-management platform (workflow automation, team collaboration).
- **Data infrastructure:** supported the digitization of the company's data infrastructure, replacing manual data handling with automated Python/SQL ETL pipelines processing 230K+ records per day.
- Designed and built Power BI dashboards for 20+ stakeholders visualizing business metrics, KPIs and operational performance, enabling transparent decision-making across teams.

Projects

Pharmaceutical Sales Analysis — GitHub link
Power BI, Power Query, DAX, SQL, Data Modeling

- Integrated and harmonized 500K+ sales records from 3 sources and identified 15+ data quality issues before modeling
- Designed a normalized star schema (5 fact/dimension tables) in Power BI with Power Query and DAX, enabling efficient queries for controlling and analytical reporting
- Built 3 dashboards (territory performance, distributor trends, revenue forecasts) for 20+ sales stakeholders

MRI Reconstruction Project — GitHub link
Python, pandas, SciPy, librosa, OpenCV, Excel reporting

- Analyzed data quality of 2,371 real-time speech MRI videos from 75 subjects, automatically detecting 8 types of audio-video issues and flagging 259 files (10.9%)
- Delivered results as structured Excel reports and charts per issue type, and recalibrated thresholds to cut false positives so flagged files can be validated by hand

MedRAG — GitHub link
Python, FastAPI, Claude API, ChromaDB, Docker

- AI assistant for healthcare documents: answers questions grounded in uploaded PDFs and data files, with AI agents for summaries and structured symptom checks

Skills & Languages

Programming: Python (pandas, NumPy, scikit-learn), SQL, PostgreSQL, Git, Docker
BI & Reporting: Power BI (DAX, Power Query), dashboard design, KPI definition and validation, data modeling (star schema), Excel (pivot tables, XLOOKUP)
Data & AI: SQL, PostgreSQL, ETL and data integration, data validation, AI-assisted analysis, LLM assistants (RAG), Azure
Languages: English - C1 (fluent, technical), German - B1 (in progress)
